

How Does ERA Impact non-PSCs ?

ERA aims to rapidly identify and transport EVT eligible patients to a Comprehensive Stroke Centre. EMS will bypass non-PSCs with potential strokes; non-PSCs will be impacted only if there is a 'walk-in' or 'in-hospital' stroke. If a stroke presents directly at a non-PSC, RAAPID should be contacted immediately to ensure the patient receives appropriate and timely care. Fast identification of stroke is key.

For 'walk-in' or 'in-hospital' strokes, immediate contact with RAAPID along with fast LAMS assessment will ensure fast identification and appropriate transport of all stroke patients.
