Routine Practices In Continuing Care

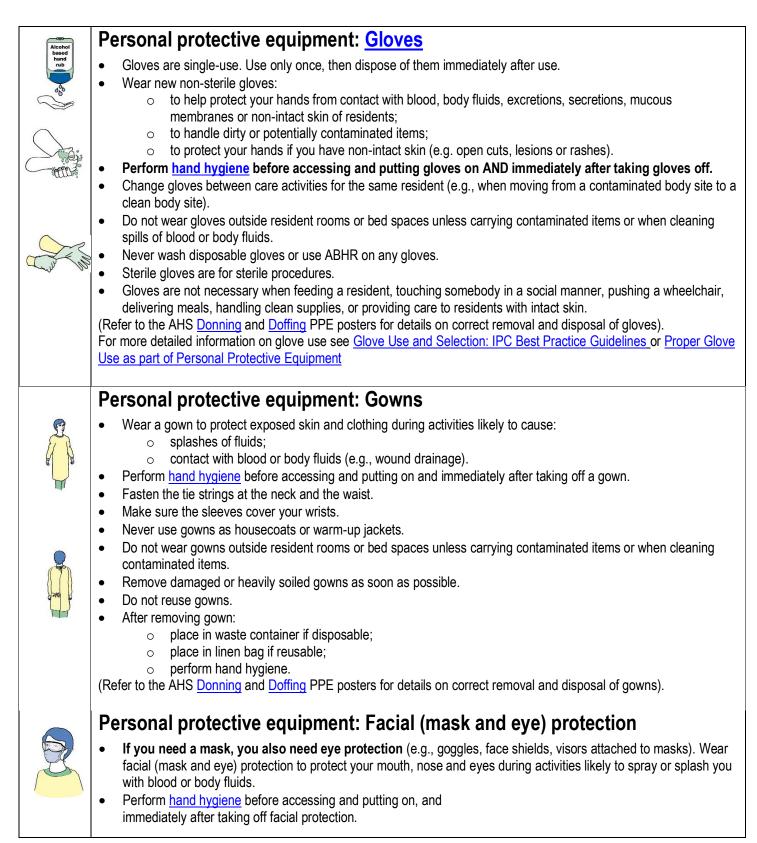

Routine Practices help prevent the spread of infections. These practices apply when interacting with residents in all settings where healthcare services are provided. Use Routine Practices for every resident, every time, regardless of their diagnosis or infectious status.

	 Proper wearing of a mask includes: ensuring a snug fit over the nose and under the chin; molding the metal bar over the nose; wearing the mask with the moisture-absorbing side closest to the face; changing the mask when it is moist; correct removal after use, touching only the elastic or ties. Prescription glasses do not meet Workplace Health and Safety Regulations for eye protection. Clean and disinfect re-useable eye protection after each use. Discard single-use masks and eye protection in waste container. (Refer to the AHS Donning and Doffing PPE posters for details on correct removal and disposal of facial protection).
	Handling resident care items and equipment
SoleD	 Bring minimal supplies into resident rooms, tub rooms, and treatment rooms. Use disposable equipment when possible. Discard items labeled as single-use after use on one resident. Dedicate re-useable equipment for a single resident use only, until discharge (e.g., thermometers, blood pressure equipment). If reusable equipment cannot be dedicated for a single resident use, clean and disinfect it between patients. Refer to manufacturer's instructions for equipment specific cleaning information Do not share personal items (e.g., shampoo, soaps, lotions, razors) between residents. Use non-sterile gloves when handling soiled items, equipment, linens (correct PPE, based on IPC RA, may also include a gown and facial protection). Handle soiled or used linens with minimal agitation and place directly in linen bag at point of care, without sorting. Do not spray wash/rinse soiled linen. Do not overfill bags. Double bag only if leaking. After residents are discharged, transferred or additional precautions are discontinued, clean/disinfect reusable equipment, discard single-use supplies that remain in resident's room and launder unused linens. For more information see Management of Patient Supplies on Discharge or Transfer, IPC Guidelines Used meal trays and beverage dishes do not require special handling. Place on the dietary cart or in an area designated for used dishes. Disposable dishes and utensils are not required. Human Waste (Feces) Management Information Sheet Encourage the use of recreational equipment (e.g., toys, shared electronic games) that are non-porous, easily cleanable and able to withstand rigorous cleaning. Ensure these items are scheduled for regular cleaning, with assigned responsibility for the task. Recreational, Comfort, Therapeutic and Play Items
	Waste and sharps handling
WASTE	 Wear gloves to remove waste from resident rooms, common care rooms (e.g., resident tub rooms) and if the outside of bag is soiled. Avoid contact with body. Remove gloves and perform <u>hand hygiene</u>. Remember: <u>New Needle, New Syringe, Every Time!</u> Dispose of sharps immediately after use in puncture-proof biohazard container. Do not overfill waste or sharps container. Follow AHS or facility waste management sorting and disposal guidelines.

	 Environmental cleaning Clean resident care areas on a regularly scheduled basis and after resident discharge or transfer. Use AHS or facility approved products and procedures. Refer to AHS or facility Environmental Services cleaning schedules and practices. If there are no written procedures refer to Principles of Environmental Cleaning and Disinfection, IPC Guidelines.
	 Ambulation outside room, bed space or transfer Before residents leave their room, educate or assist them with: performing hand hygiene; performing respiratory hygiene if coughing or sneezing; putting on clean clothing or clean housecoat; ensuring dressings and incontinence products are able to contain any body fluids or drainage. Transport Staff should assess the risk of spreading infection and choose clean personal protective equipment (PPE) if necessary, to handle the resident during transport and at the transport destination, using Infection Prevention and Control Risk Assessment (IPC RA)
	 Visitors Encourage and instruct visitors (family, friends, private caregivers, etc.) to: perform hand hygiene upon entry into and exit from the facility; practice respiratory hygiene while visiting; reschedule visits when feeling unwell; contact facility staff if providing direct care to a resident.
H	 Resident centered care (RCC also known as Eden or Butterfly model of care) Although it may seem challenging to adapt infection prevention and control practices in a home like setting, by understanding and adhering to these basic infection principles (such as routine practices) it is possible. Adherence to Routine Practices helps prevent the spread of infection. The goal is to prevent the transmission of organisms/germs from one person to another during all resident interactions regardless of setting. Balancing safety and potential risks with a person centered approach ensures the residents can then enjoy participating in activities while living in a communal setting, knowing that a culture of safety is present. Prior to every resident/client interaction (regardless of the workspace where an activity occurs), there is a responsibility to assess the infectious risk posed by the resident, by the situation/environment and/or by the procedure/task. Resident hand hygiene must be a focus before and after any activity and on a regular basis throughout the day.
